Art Unit: 2818

The amendment filed May 10, 2007 has been entered and made of record as paper no. 0507.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 to 7 stand rejected under 35 U.S.C. 103(a) as being unpatentable over, Applicants' prior art figure 1 in view of Chang et al (US 6,696,717 B2).

Applicants' prior art figure 1 discloses all the subject matter claimed except for the gate being formed by two different materials. Chang discloses a gate electrode having a first region (116) filled with polysilicon germanium and a second region (124) formed of polysilicon on top of the first region. Lines 48-50, column 3 of Chang teaches that the control gate comprising both first region and second region. Therefore, it would have been obvious to one of ordinary skill in the art to form a control gate having two gate regions in Applicants' prior art figure 1 as taught by Chang in order to improve the vertical MOSFET transistor.

In re claim 6, the upper (124) and lower (116) layer gate materials in Chang comprises polysilicon.
